Title	CraveReels – A Video-First Food Discovery and Smart Price Comparison Application
App Name	CraveReels
Problem Statement	Food delivery users often need to switch between multiple applications to discover food, compare prices, check discounts, evaluate restaurants, and find the best deal. Existing food delivery platforms mainly focus on browsing through static menus and do not provide an engaging video-first discovery experience combined with cross-platform price comparison. CraveReels aims to solve this problem by providing a single application where users can discover food through short-form video reels, compare prices and offers across multiple delivery platforms, receive AI-based food recommendations, and select the best available deal. This reduces the time and effort required to search for food and helps users make smarter and more cost-effective ordering decisions.
Abstract	CraveReels is a short-form video-driven food discovery and smart price comparison application. The application combines an engaging reel-style food browsing experience with useful food ordering and comparison features. Users can discover dishes through full-screen food preparation videos, view important details such as restaurant name, preparation time, calories, protein content, and ingredients, and compare prices across different food delivery platforms. The application also includes Crave AI, an intelligent food assistant that provides recommendations based on user preferences such as mood, cravings, budget, and dietary requirements. The main objective of CraveReels is to make food discovery more engaging, simplify price comparison, and help users choose the best available deal through a single user-friendly platform.
Target Users	▪ College students and young adults looking for affordable food options. ▪ Food enthusiasts who enjoy discovering new dishes and restaurants. ▪ Users who frequently order food online. ▪ Fitness-conscious users interested in calories, protein, and nutritional information. ▪ Users with specific dietary preferences such as Vegetarian, Vegan, High Protein, or Low Carb. ▪ Budget-conscious users who want to compare prices and discounts before ordering.
Planned Core Features	▪ ***Video-First Food Discovery Feed*** – Users can discover food through short-form, full-screen cooking and food preparation videos. ▪ ***Multi-Platform Price Comparison*** – Compare food prices, discounts, delivery charges, and available offers across supported food delivery platforms. ▪ ***Crave AI Food Assistant*** – Provides intelligent food recommendations based on cravings, mood, budget, dietary preferences, and nutritional requirements.

	▪ ***Search and Smart Filters*** – Users can search for dishes, restaurants, and cuisines and apply filters such as Pure Veg, Lowest Price, Highest Protein, Shortest Preparation Time, and Top Rated. ▪ ***Cart and Order Tracking*** – Users can add selected food items to the cart, choose a preferred delivery platform, and track the order status.
App Icon	To be added – CraveReels application logo/icon.

Mobile Application Development – CA1: Review 2
UI/UX Design Review

Milestone: Wireframes, mockups, and visual design language

Section	Details
Group Number	18
Team Members	Prachi Priya 25MCAR0111, Suvendu Mata 25MCAR0136
Title	CraveReels – A Video-First Food Discovery and Smart Price Comparison Application
App Name	CraveReels
Screens Designed	  
Wireframe / Mockup Tool	Wireframes and high-fidelity UI mockups have been prepared to define the user flow and visual structure of the application. The design follows a mobile-first approach with a full-screen vertical reel interface for food discovery. The main home screen focuses on immersive food videos, while additional information such as nutrition details, price comparison, filters, and AI recommendations is organized through cards, bottom sheets, tabs, and expandable sections to avoid cluttering the main screen. ***Tool*** Figma will be used for creating wireframes, mockups, screen designs, and interactive prototypes. ***Figma Link:*** To be added.
Colour Palette & Typography	The application follows a modern dark theme inspired by food and culinary visuals. • ***Primary Background:*** Dark / Black tones • ***Primary Accent:*** Warm Orange / Red tones representing food, energy, and appetite • ***Secondary Colours:*** White and light grey for readable text and supporting information • ***Success / Best Deal Indicator:*** Green accent for highlighting the lowest price and best offers. The typography uses a clean and modern sans-serif font to maintain readability across different mobile screen sizes. Headings are visually prominent, while secondary information uses smaller but clearly readable text.

Design Consistency Notes	Design consistency is maintained by using: • Consistent colour usage across all screens. • Standardized buttons, icons, cards, and navigation components. • Similar spacing and padding patterns throughout the application. • Clear visual hierarchy between primary actions and secondary information. • Consistent food cards and platform comparison layouts. • High-contrast text and background combinations for better readability. • Clear Veg / Non-Veg indicators and easily understandable icons . The interface is designed to be simple, readable, visually engaging, and accessible for mobile users.
Layout & Visual Balance	The application follows a mobile-first responsive layout. The main food discovery screen uses a full-screen vertical video layout to provide an immersive reel experience. Important information such as food name, restaurant name, and Veg / Non-Veg indicator is immediately visible. Secondary information such as calories, protein, preparation time, ingredients, and recipe details is placed inside expandable cards or bottom sheets. Spacing, alignment, and component sizing are kept consistent to maintain visual balance. Interactive controls are positioned for easy thumb access, and unnecessary elements are avoided to keep the interface clean and focused.
Add-ons as per Remarks	Based on faculty remarks and feedback, necessary improvements will be incorporated into the UI/UX design, including better screen navigation, improved information hierarchy, enhanced visual consistency, and additional user-friendly interactions.

Evaluation – UI Design & Visual Appeal

Mobile Application Development – CA1: Review 3

Development & Responsiveness Review

Milestone: Core build progress and responsive layout implementation

Section	Details
Group Number	18
Team Members	Prachi Priya 25MCAR0111, Suvendu Mata 25MCAR0136
Title	CraveReels – A Video-First Food Discovery and Smart Price Comparison Application
App Name	CraveReels
Features Implemented	▪ Video-first food discovery feed (reels) ▪ Food details and nutrition view ▪ Multi-platform price comparison ▪ Search and filters ▪ Crave AI food assistant ▪ Add to cart ▪ Platform selection ▪ Order tracking ▪ Bookmarks / favourites ▪ User profile
Tech Stack Used	React 18+ with TypeScript , Tailwind CSS , Framer Motion , Lucide React Icons React Context API , HTML5 Video API
Devices / Screen Sizes Tested	▪ Android Mobile: 360×800, 375×812, 393×852, 412×915 ▪ Android Tablet: 768×1024 ▪ Web: 1366×768, 1440×900
Responsive Design Approach	The application follows a ***mobile-first responsive design*** using Tailwind CSS. Flexible Flexbox and Grid layouts are used along with percentage-based widths, responsive units, and breakpoints such as sm, md, lg, and xl. The layout adapts smoothly to different screen sizes, while responsive typography, spacing, visibility, and component sizing are used to maintain usability across mobile, tablet, and desktop devices.
Known Issues / Bugs	▪ Video autoplay may not work on some low-end devices or browsers due to browser/data-saver restrictions. ▪ Price comparison currently uses mock data; live API integration is pending. ▪ Crave AI responses may be slower under poor network conditions. ▪ Order tracking currently uses simulated data; real-time tracking integration is pending.
Add-ons as per Remarks	Based on the feedback from the previous review, the following improvements were implemented: • Improved information hierarchy on the food details screen. • Cleaner and more consistent UI components. • Improved spacing and alignment. • Enhanced price comparison layout with a clear ***"Best Deal"*** highlight.

	• Smoother micro-interactions and transitions. • Improved navigation flow between screens. • Optimization for better mobile performance.

Evaluation – Responsiveness & Interactivity:

Mobile Application Development – CA1: Review 4
UX, Navigation & Usability Testing

Milestone: User flow, interactivity, and usability feedback

Section	Details
Group Number	18
Team Members	Prachi Priya 25MCAR0136 , Suvendu Mata 25MCAR0136
Title	CraveReels – A Video-First Food Discovery and Smart Price Comparison Application
App Name	CraveReels
Navigation Flow Summary	Users start from the Home screen, where they can browse food through a full-screen reels interface. From a food reel, users can open the **Food Details** screen to view nutrition, ingredients, preparation time, and other information. Users can navigate to the **Explore/Search** section to search for dishes, restaurants, and cuisines and apply filters. From any selected dish, users can open **Price Comparison** to compare prices and offers across delivery platforms. Users can also access the **Crave AI** assistant for personalized food recommendations. Selected dishes can be added to the **Cart**, followed by platform selection and checkout. After placing an order, users can view the **Order Tracking** screen. Bookmarked dishes and user information are accessible through the respective sections.
Interactive Components Used	**Interactive Components Used** • Buttons and icon buttons • Search bar • Category and filter chips • Food cards • Video reels with autoplay and mute/unmute controls • Double-tap like/bookmark interaction • Expandable food details and nutrition cards • Bottom sheets / modal dialogs • Price comparison cards • Platform selection controls • Add-to-cart controls • Cart quantity controls • Checkout controls • Order tracking status indicators • Navigation tabs • Crave AI chat/input interface • Bookmark/favourite controls
Usability Testing Method	Usability testing was conducted through **peer testing and sample-user testing.** Users were asked to perform common tasks such as discovering a food item through reels, searching for a dish, applying filters, checking nutrition information, comparing prices, using Crave AI, adding an item to the cart, and navigating through the ordering flow. Feedback was collected by observing the ease of navigation, clarity of information, responsiveness of interactive components, and overall user experience.
Usability Feedback Received	The feedback indicated that the reel-based food discovery interface was engaging and easy to understand. Users found the food details, nutrition information, and price comparison features useful.

	Some improvements were identified, including making navigation more intuitive, improving the visibility of important actions such as **Add to Cart** and **Best Deal**, reducing unnecessary information on the main reel screen, and maintaining consistent spacing and component placement. These improvements were incorporated into the interface to make the application simpler and more user-friendly.
Navigation Improvements Planned	• Improve navigation transitions between Home, Explore, Food Details, Price Comparison, Cart, and Profile. • Provide clearer navigation indicators for the currently selected section. • Improve back navigation from detailed screens to the previous screen. • Make important actions such as **Compare Price** and **Add to Cart** more accessible. • Further optimize the navigation experience for different screen sizes. • Improve the ordering flow by reducing unnecessary steps.
Add-ons as per Remarks	Based on the feedback from the previous review, improvements were implemented in the navigation flow and overall user experience. The food details and price comparison sections were reorganized for better readability, important actions were made more visible, spacing and alignment were improved, and smoother transitions were added between screens.

Mobile Application Development – CA1: Review 5

Final Presentation & Deployment Review

Milestone: Completed app, deployment, and final demo

Section	Details
Group Number	*18*
Team Members	*Prachi Priya 25MCAR0111 , Suvendu Mata 25MCAR0136*
Title	*CraveReels – A Video-First Food Discovery and Smart Price Comparison Application*
App Name	*CraveReels*
Deployment Details	*CraveReels is developed as a responsive web-based application using **React 18+ with TypeScript, Tailwind CSS, Framer Motion, Lucide React Icons, React Context API, and HTML5 Video API**. The application is designed to run across Android mobile, tablet, and desktop/web screen sizes.* ***Github Link:*** *https://github.com/PrachiPriya23/CraveReel.git*
Final Feature Summary	*The final build of **CraveReels** provides a video-first food discovery and smart price comparison experience with the following features:* • ***Video-First Food Discovery Feed** – Users can browse food through full-screen reels with autoplay, looping, and mute/unmute controls.* • ***Food Details & Nutrition** – Displays restaurant, food name, Veg/Non-Veg status, preparation time, calories, protein, ingredients, recipe information, and other food details.* • ***Multi-Platform Price Comparison** – Compares available food prices, discounts, delivery charges, and offers across supported delivery platforms.* • ***Best Deal Highlight** – Clearly highlights the lowest-price option to help users identify available deals.* • ***Multi-Restaurant Comparison** – Allows users to compare similar dishes based on price, portion, rating, and delivery information.* • ***Crave AI Food Assistant** – Provides food recommendations based on cravings, mood, budget, dietary preferences, and nutritional requirements.* • ***Search and Smart Filters** – Users can search dishes, restaurants, and cuisines and apply filters such as Pure Veg, Lowest Price, Highest Protein, Shortest Preparation Time, and Top Rated.* • ***Cart Management** – Users can add food items, adjust quantities, select a delivery platform, and proceed toward checkout.* • ***Order Tracking** – Displays the different stages of an order, including confirmation, preparation, pickup, and delivery.* • ***Bookmarks/Favourites** – Users can save preferred food items for later.* • ***Responsive Interface** – The application adapts to mobile, tablet, and desktop screen sizes using responsive layouts and breakpoints.*
Demo Notes	*During the final presentation, the following workflow will be demonstrated:* 1. *Launch the **CraveReels Home screen**.* 2. *Browse food items through the **full-screen reels interface**.* 3. *Demonstrate video autoplay and **mute/unmute** interaction.* 4. *Open a food item and display its **details and nutrition information**.* 5. *Use **Search and Filters** to find a specific dish or cuisine.* 6. *Open the **Price Comparison** section and demonstrate the Best Deal highlight.* 7. *Demonstrate the **Crave AI** food recommendation feature.* 8. *Add a selected dish to the **Cart**.* 9. *Select the preferred delivery platform and proceed through the **checkout flow**.* 10. *Demonstrate the **Order Tracking** interface.*

	11. *Show the **Bookmarks/Favourites** section and responsive behaviour on different screen sizes.* *The navigation flow developed in the previous review connects Home, Explore, Food Details, Price Comparison, Crave AI, Cart, Checkout, and Order Tracking*
Project Report Submitted	*(Yes/No — attach or link the final project report document)*
App Icon	
Add-ons as per Remarks	*Based on the feedback from Reviews 2, 3, and 4, the following improvements have been incorporated into the final build:* • *Improved navigation flow between major screens.* • *Improved information hierarchy on the Food Details screen.* • *Enhanced visibility of **Compare Price**, **Best Deal**, and **Add to Cart** actions.* • *Improved spacing, alignment, and consistency of UI components.* • *Smoother screen transitions and micro-interactions.* • *Improved responsive layout for different mobile, tablet, and desktop screen sizes.* • *Cleaner reel interface by reducing unnecessary information from the main screen.* • *Improved price comparison layout and Best Deal presentation.* • *Improved ordering flow with clearer navigation between Cart, Platform Selection, and Checkout.* • *Improved accessibility and thumb-friendly placement of interactive controls.* • *The application continues to use mock data for price comparison and simulated data for order tracking where live API/real-time integrations are pending, as documented in Review 3.*

Final Evaluation – CA1 Rubric Total 15 Marks
